Directional Control Valves Technical Information: Product overview

FLEXIBILITY OF DESIGN The Danfoss directional control valves are designed to give customer flexibility over a broad range of flow and pressure capabilities. Actuator options include a range of levers, cable actuators, hydraulic and pneumatic pilot controls, two-axis joysticks, and electrohydraulic solenoids. Flow rates range from 0 to 100 l/min [26 US gal/min].

CIRCUIT OPTIONS

- Parallel circuits
- Series circuits
- Tandem circuits
- Priority circuits
- Regenerative circuits
- Power beyond

CAPABILITY

- Flow rates from 0 to 100 l/min [26 US gal/min]
- System pressure up to 250 BAR
- Up to 12 work sections
- 12 cm³/min [0.7 in³/min] leakage

ACTUATION OPTIONS

- Handles and levers
- Mechanical two-axis joystick
- Spool ends
- **ElectroHydraulic Control (EHC)** on/off solenoid
- Cable control
- Pneumatic pilot control
- Dual spool ends

MODULAR VALVES

Valve model	l/min [US gal/min]					Number of Spools	Circuit	Page
	20 [5]	40 [11]	60 [16]	80 [21]	100 [26]			
CDS-100						100 [26]	1 to 12	Parallel Tandem Series
CDS-60				60 [16]			1 to 12	Parallel Tandem Series

 Indicates Maximum Working Pressure Rated At 210 bar [3000 psi]

FLUIDS

Hydraulic fluid performs three basic functions in a hydraulic system: It transfers energy, lubricates moving components, and transports heat and contaminants out of the system.

Base stock and additives

Danfoss valves are designed to operate with mineral-based fluids containing oxidation, rust, and foam inhibitors, compatible with fluoroelastomer seals. Consult your fluid supplier for information on seal compatibility.

Viscosity

Viscosity is the most important property of a hydraulic fluid. It is a measurement of how the fluid resists flow. Low viscosity fluids increase internal leakage; high viscosity fluids increase pressure drop through the valve. Use a fluid that meets the viscosity limits published in this catalog. For specific requirements, see technical data in each section.

Temperature

Temperature affects a fluid's viscosity. Higher temperature fluid has lower viscosity. Operating at excessive temperatures may have other detrimental effects on your hydraulic fluid. Design your hydraulic system to operate within the specified temperature range. Specific requirements are published in each section.

For more information

For more information on hydraulic fluid selection refer to *Hydraulic Fluids and Lubricants Technical Information*, Danfoss publication **520L0463**.

FILTRATION

Effective filtration is critical to a hydraulic system's performance and working life. Employ system filtration capable of meeting the published requirements in each valve section. Be aware that other components in the system may have more stringent requirements. Design your filtration system to satisfy the requirements of the most sensitive component.

Return line filtration

Return line filtration is generally adequate for Danfoss valves. We recommend a 10 micron nominal (20 micron absolute) or finer filter. Insure the filter in your system is properly sized and maintained. To facilitate proper filter maintenance, use a pressure gauge or other indicator to signal when it is necessary to change the filter. Never allow filter to reach its bypass condition. Follow the filter manufacturer's maintenance recommendations.

Cleanliness

Hydraulic system contamination must not exceed the limits published for each valve. Limits are specified per ISO 4406 (1999). When measuring system contamination, calibrate test equipment in accordance with the ACFTD method.

For more information

For more information on system filtration, refer to *Design Guidelines for hydraulic fluid cleanliness*, Danfoss publication **520L0467**.

CDS 100

CDS 60

SPECIFICATIONS

Maximum flow (CDS 100)	100 l/min [26.4 US gal/min]
Maximum flow (CDS 60)	60 l/min [15.8 US gal/min]
Work pressure	210 bar [3050 psi]
Maximum pressure	250 bar [3625 psi]
Maximum pressure (outlet section)	40 bar [580 psi]
Temperature range	-40° to 80° C [-40 to 176° F]
Recommended fluid type	Mineral based hydraulic oil
Recommended viscosity	26-55 mm ² /sec (cSt) [123-255 SUS]
Minimum fluid cleanliness (per ISO 4406)	19/16

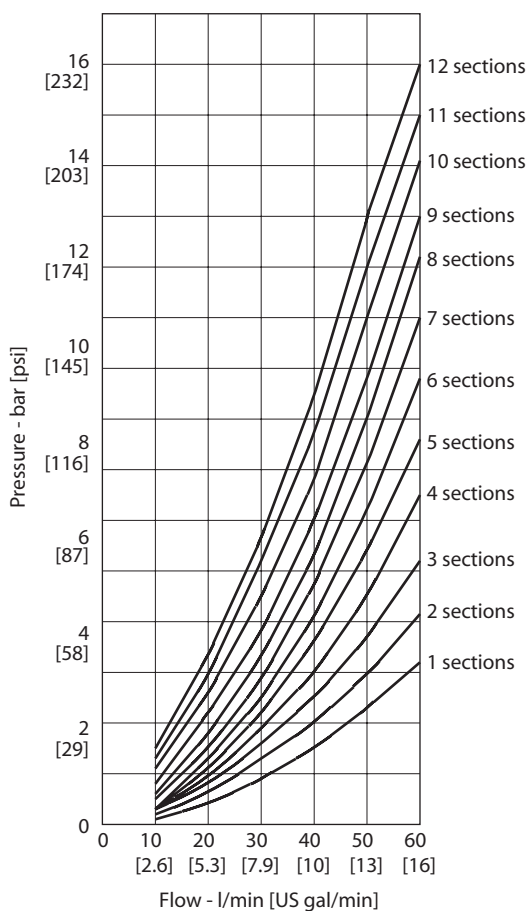

Directional Control Valves Technical Information: CDS 60 and 100

TYPICAL PERFORMANCE *Pressure vs. flow curves for main relief valve*

Based on oil temperature of 45°–50°C [113°–122° F]. Viscosity 32 mm²/sec (cSt) [151 SUS]. CDS spool leakage (standard) at 70 bar [1015 psi], 50°C [122°F], ISO VG46: 10 cm³/min [0.61 in³/min]

Pressure drop (P-T) CDS 60

Pressure drop (P-T) CDS 100

CIRCUIT TYPES

Work section order code (example)

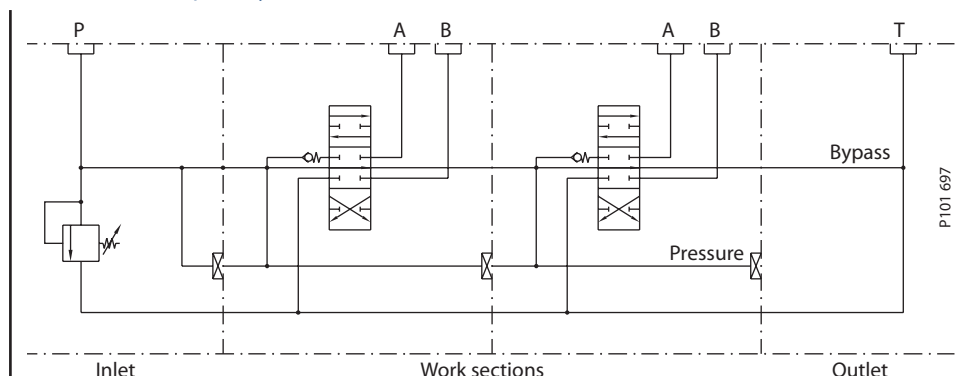

A100	1	A	E	2	A	1	A	B	A100	140/40*
------	---	---	---	---	---	---	---	---	------	---------

1 Parallel circuit (no priority)

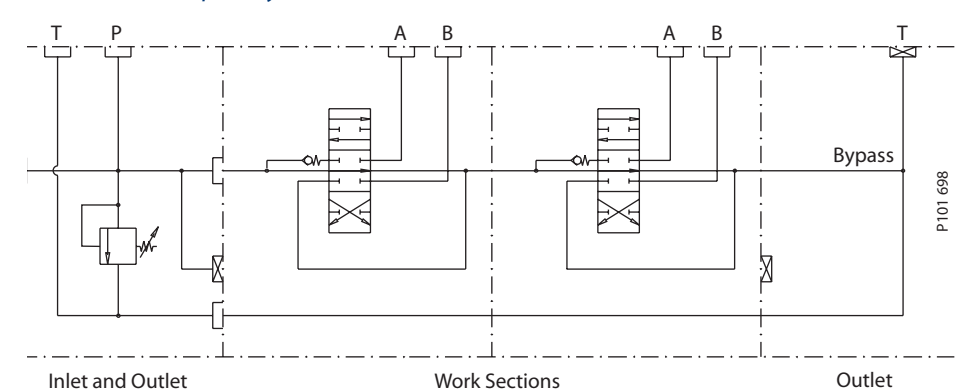

When two or more sections operate simultaneously, flow favors the lowest pressure.

2 Tandem circuit (priority)*

When two or more sections operate simultaneously, only the section closest to the inlet receives flow.

3 Series circuit (no priority)*

When two or more sections operate simultaneously, the section closest to the inlet receives flow. Return flow feeds the sections downstream.

* on request

**Danfoss Mobile Power and Control Systems
– Market Leaders Worldwide**

Danfoss is a comprehensive supplier providing complete systems to the global mobile market.

Danfoss serves markets such as agriculture, construction, road building, material handling, municipal, forestry, turf care, and many others.

We offer our customers optimum solutions for their needs and develop new products and systems in close cooperation and partnership with them.

Danfoss specializes in integrating a full range of system components to provide vehicle designers with the most advanced total system design.

Danfoss provides comprehensive worldwide service for its products through an extensive network of Global Service Partners strategically located in all parts of the world.
